

SUCCESS YEAR 2

FAQ

❖ *How will Year 2 be different compared to Year 1?*

- New toolkit items:
 - New pre-op clinic tool to assess risk for difficult catheterization, urinary retention, or catheter injury
 - Tools tailored for same day surgery and emergency department settings
 - New algorithm for voiding trials in patients who required ISC or Foley
 - Strategies for applying the tools across the continuum of care for all patients (e.g., emergency department, same day surgery, medical patients)
- New process and outcomes measures
- Strategies provided to assess and improve prior tool implementation. Note, these strategies will also be applicable to help you reduce other healthcare-associated complications.

❖ *Why should I continue with SUCCESS if my hospital did well in Year 1?*

- Leverage the momentum from your hard work in 2023 to continue to improve safety for your patients
- Capitalize on your opportunity to sustain improvements in catheter safety
- New QI measures for the management of urinary retention
- New QI measures for catheter appropriateness

❖ *Will the Dropbox reports be updated?*

- Yes! We have plans to offer more granular information which will help get to the root of improvements needed
